Subject: Urine Collection

Dear Jane,

I have prepared a small sheet for the urine collection. I am wondering in how far it can help you to have storage available. I reduced the amount to be stored as a reserve to 1x250mL at -70 and 3x100mL at -20. The rest can be discarded. Note that the collection for nicotine on day 4 is only for groups A and B (cigarette burn time groups, Marlboro lights and ultra). Does this help?

Best regards

Hans
